

How to reset the location transmit time for the Track Pro app

If the tag is not searching for the signal at the desired location transmit time, follow instructions below.

Step 1

To enable the reset feature, insert the provided magnet pull tab into the magnet slot located on the right-hand side of the Track Pro-S.

IMPORTANT: The reset function requires the use of original magnet pull tab. If the magnet has been discarded, please contact your ESCO representative.

Step 2

Leave magnet inserted for a minimum of 12 hours to complete the signal reset.

Step 3

Once the 12 hours have elapsed, pull the magnet tab from the slot at the specific time you want tracking to begin.

Track Pro-S will now search for satellite signals and share the location of your assets at the time of magnet tab removal.

Note: tag must have line of sight to the sky for this step.
